Information for Potential Students

August 07, 2023

Duc A. Hoang

Department of Informatics
Faculty of Mathematics, Mechanics, and Informatics
VNU University of Science, Hanoi, Vietnam
hoanganhduc@hus.edu.vn

A Brief Introduction
A Short CV

- **Name (in Vietnamese):** Hoàng Anh Đức
- **Name (in publications):** Duc A. Hoang
- **Current Position:** Lecturer at VNU-HUS, Hanoi, Vietnam (Feb. 2023 - present)
- **Research Interests:** Graph Algorithms, Combinatorial Reconfiguration
- **Education:**
  - **B.Math** degree from VNU-HUS, Hanoi, Vietnam (2008–2013)
  - **M.S.** and **Ph.D.** degrees (Information Science) from JAIST, Ishikawa, Japan (2013–2015 and 2015–2018 respectively)
- **Homepage:** `https://hoanganhduc.github.io/` (contains everything about my research and teaching)

Note

This document is intended for those considering working with me. Some information here may be useful for students in general

A Brief Introduction
Contact Me

If you want to work with me on some research problems:

- Please *skim through my recent publications, my list of open problems, and my list of participated events* to have some ideas of what I have been working on recently
  - I am happy to work on problems related to graph theory. *If you have some graph problems in mind that you are interested in and want to solve, I am happy to discuss with you to see if we can further collaborate*
- Please *read this document* to have some ideas (of what I have learned and collected so far) about doing research in TCS
- Please contact me by *sending an email* to my current email address hoanganhduc@hus.edu.vn
  - If we have not yet known each other, please *attach to your email a copy of your academic transcript* (an unofficial copy is fine) and *your CV* (both in **PDF format**, either in **English or Vietnamese**)
- I expect you to *at least* have *some basic knowledge on discrete mathematics and graph theory* (which can be obtained by taking an undergraduate-level course related to these subjects)
  - Please take a look at *some recommended materials in this document*
  - Some other resources I collected can be found here

Publishing in TCS

- **(Most Important Point)** Collaborate, work hard, and achieve your results
- **(Optional)** Maintain an e-print version on arXiv
- **(Optional)** Announce your results in some semiars, workshops, or unreferred conferences
- **(Recommended)** Submit your results to a referred conference
  - Some conferences are highly selective, for example, STOC, FOCS, SODA, ICALP, and so on
  - Quick notification (accept/reject) within around three to six months
  - Usually having just one round of review. Reviewers have no idea whether their comments have been addressed by the authors. (Some conferences have "rebuttal phase")
  - Reviewers are primarily focused on whether the work is important and superficially appears correct
- **(Recommended)** Submit your results to a referred journal
  - It is common to expand your conference's paper to a journal version. (Yes! You can publish both conference and journal versions of the same results)
  - Slow notification (accept/reject) within six months to a year
  - Your results will usually be reviewed thoroughly by 2-3 reviewers. Usually having more than one round of review
  - The journal version of your paper is the final version and can be trusted. (In several cases, flaws exist even in the journal version)

Things You May (Not) Already Know

- Traditionally, in most areas of mathematics and theoretical computer science, authors are listed in alphabetical order by last name
- Academic Profiles: Google Scholar, ORCID
- Mailing Lists: DMANET, THEORYNT
- Journal Ranking:
  - Scimago Journal & Country Rank
  - Scopus Indexed Journals
  - WoS (Web of Science) Indexed Journals
- Conference Ranking:
  - CORE Rankings Portal
  - Conference Ranks
- List of TCS conferences and workshops @ StackExchange
- Links to Combinatorial Conferences (maintained by Douglas B. West)

Writing
Advice/Inspiration
Getting Scientific Papers/Books/etc.

Things You May (Not) Already Know (cont.)

- Conferences in Theoretical Computer Science, maintained by Miki (Nicolas) Hermann
- The Elsevier boyscott
- Uploading a paper to arXiv.org
- Online Collaboration
  - Online LaTeX editor: Overleaf
  - Workspace: Slack, Zulip (support LaTeX), Discord, Google, Zalo (Vietnamese)
  - Video Conference: Google Meet, Zoom

5 Things You May (Not) Already Know
David Eppstein's Two Models of Algorithms Research
Some Recommended Materials
Discrete Math
Algorithms, Computational Complexity
Writing
Advice/Inspiration
Getting Scientific Papers/Books/etc.

David Eppstein's Two Models of Algorithms Research

Two Models of Algorithms Research

I. Read lots of theory papers

II. Choose a problem with lots of previous work (evidence it's interesting)

III. (optional) Add extra complications to the problem so you can convince people your results are more difficult than previous work

III. Find an algorithm that's better than all the previous results

IV. Write it up and publish it in theory conferences and journals

I. Learn about areas outside of theoretical CS

II. Choose a problem in one of those application areas where faster or more accurate solutions can make a practical difference

III. Abstract essential features to get new clean theoretical problem

IV. Find an algorithm that's better than all the previous results

V. Write it up and publish it in theory conferences and journals

VI. Implement and communicate your results with the community your problem came from, discover related problems, repeat

Open problems in graph theory and geometry — D. Eppstein, ICS 269, 01/25/02

Some Recommended Materials

Discrete Math

- Discrete Mathematics and Its Applications, 8th edition, by Kenneth H. Rosen
- Building Blocks for Theoretical Computer Science, by Margaret M. Fleck
- Lectures on Discrete Mathematics given by Shai Simonson at ArsDigita University in 2000
- Connecting Discrete Mathematics and Computer Science, by David Liben-Nowell. A preprint version of the book is available

Some Recommended Materials

Algorithms, Computational Complexity

- Computers and Intractability: A Guide to the Theory of NP-Completeness, by Michael Garey and David S. Johnson – One of the most influential books on the NP-complete theory, which is usually known as "the Garey&Johnson book"
- Algorithms, by Jeff Erickson
- Computational Complexity: A Modern Approach, by Sanjeev Arora and Boaz Barak. A draft of the book is available
- Parameterized Algorithms by Marek Cygan, Fedor V. Fomin, Łukasz Kowalik, Daniel Lokshtanov, Dániel Marx, Marcin Pilipczuk, Michał Pilipczuk, and Saket Saurabhs

Getting Scientific Papers/Books/etc.

- **(For Vietnamese)** The Online Portal maintained by Vietnamese National Agency for Science and Technology Information
- If you cannot get a paper, **get in touch with the (corresponding) author(s) to ask for a copy before trying the following resources**
  - Mutual Aid-Science Community – you may get published papers by asking people in the community for help
  - Sci-Hub
  - Z-Library
    - Desktop App: Windows, MacOS, Linux (DEB)
  - Library Genesis: here or here
  - PDFDrive
